

How to make VirtualBox's VM screen resolution independent from the host machine resolution

Roberto Bifulco — Wed, 03/30/2011 - 23:21

Some months ago I was playing around with ORACLE Virtual Box for one of my works. The work was a server installation for a first virtualization evaluation: the interested company decided to try virtualization in an unobtrusive way, starting smoothly, using an existing os installation.

Mounting a shared folder between host and guest machine in VirtualBox (for Linux)

Roberto Bifulco — Thu, 02/03/2011 - 21:49

Oracle [VirtualBox](#) exposes an interesting feature to share a folder between the host and the guest machine.

To mount a shared folder from the guest command line just follow these steps (We assume that the shell is in the root [/] directory and that the name of the host's shared directory is "Downloads"):

MySQL installation troubles

Roberto Bifulco — Sat, 11/27/2010 - 11:44

During my work i had some troubles while installing a MySQL dbms on a WindowsXP virtual machine. It was quite strange to me because the MySQL installation is just a double click on the installation exe file and, after putting in the wizard some infos, a click on the start installation dialog.
